How Rhemic AI builds and holds visibility.	
SECTION 06	
Applying this to real estate	12
Why AEO matters for high-stakes service categories.	

01

SECTION 01 · INTRODUCTION

What this document shows.

Buyers no longer always start at Google. They ask AI. The businesses cited by name in those answers win the recommendation.

Buyer behaviour is changing faster than agency playbooks. Increasingly, the discovery question is asked of ChatGPT, Claude, Gemini, or Perplexity, and those answer engines cite a short list of businesses by name. Showing up in that short list is what Answer Engine Optimization is for, and it is the one fulfillment layer most agencies cannot deliver themselves.

How to read each client section

- Business overview. What the client does and where.
- Test queries. Exact buyer-intent phrases you can paste into ChatGPT, Claude, Gemini, or Perplexity right now to verify.
- Visibility evidence. Screenshots from a recent visibility scan showing where the client appears.
- Engagement context. How long Rhemic has been working with the business and any platform constraints worth knowing.

Why AEO matters for service businesses

- Answer engines tend to cite a short list per query, not ten links.
- Once cited, a business compounds visibility across related queries.
- Buyer-intent queries ("best X near me", "who should I use for Y") are where purchase decisions actually form.
- The AI surface moves faster than classic SEO. First-movers can hold their position with relatively modest ongoing work.

02

SECTION 02 · CLIENT

Choose One Auto Consulting

Owner-operated auto-buying advocacy across the Dallas Fort Worth metroplex.

WEBSITE	chooseoneautoconsulting.com
LOCATION	Irving, TX (serving DFW metroplex)
VERTICAL	Auto consulting and car-buying concierge
ENGAGEMENT	AEO across ChatGPT, Claude, Gemini, Perplexity

Test these queries yourself

Open ChatGPT, Claude, Gemini, or Perplexity and paste any of the following:

- "Best car buying concierge service in DFW."
- "Recommend a car buying consultant in Irving, Texas."
- "Auto consultant for bad credit in Dallas Fort Worth."
- "Who can negotiate a car deal for me near Irving TX?"

SECTION 02 · CLIENT

Visibility evidence

Captured during a recent multi-engine visibility scan.

FIGURE 01 · CHATGPT

ChatGPT response to "what is the best car buying concierge service in DFW?". Choose One Auto Consulting is cited as the recommended local DFW option, ranked second overall behind a national-scale competitor.

Engagement context

Choose One Auto Consulting is one of Rhemic AI's more recent engagements. AI visibility began to surface within the first three to five weeks of optimization. Even at this early engagement stage, the business is already cited by name in the answer and explicitly recommended as the local-feeling DFW option. The Google Business Profile is still in setup, so classic search results are not yet representative.

03

SECTION 03 · CLIENT

Kay's Groom Room

One-on-one in-home dog grooming. A specialty studio for anxious dogs, matted coats, and creative grooming in southeast DFW.

WEBSITE	kaysgroomroom.com
LOCATION	Seagoville, TX (southeast DFW)
VERTICAL	Pet services / dog grooming
ENGAGEMENT	AEO with structured-data work on the live site

Test these queries yourself

Open ChatGPT, Claude, Gemini, or Perplexity and paste any of the following:

- "Best pet groomer in Seagoville, Texas."
- "Best dog groomer in Seagoville TX."
- "Where can I take an anxious dog for grooming near Dallas?"
- "Who handles matted dogs in Mesquite or Balch Springs?"

SECTION 03 · CLIENT

Visibility evidence

Captured during a recent multi-engine visibility scan.

FIGURE 02 · CHATGPT

ChatGPT response to “what is the best pet groomer in Seagoville Texas”. Kay’s Groom Room is cited as the top recommendation, with the studio’s positioning (one-on-one, in-home, patient grooming) reflected directly in the answer copy.

Engagement context

Kay’s Groom Room runs an extensive structured-data and FAQ surface across breed, service, and city pages. The site is actively under optimization, with new schema and AEO entity work being deployed on an ongoing basis.

04

SECTION 04 · CLIENT

Wava Grill

New York-style halal street food in Dallas. A clear illustration of how AEO compounds when SEO foundations are already in place.

WEBSITE	wavagrill.com
LOCATION	Dallas, TX (multi-location)
VERTICAL	Restaurant / halal QSR
ENGAGEMENT	AEO with established Google Business Profile in place

Test these queries yourself

Open ChatGPT, Claude, Gemini, or Perplexity and paste any of the following:

"Best halal chicken over rice place in Richardson."

"Best halal restaurant in Dallas."

"Where can I get New York style halal food in Dallas?"

"Recommend a gyro platter spot in Dallas TX."

SECTION 04 · CLIENT

Visibility evidence

Captured during a recent multi-engine visibility scan.

FIGURE 03 · CHATGPT

ChatGPT response to “what is the best halal chicken over rice place in Richardson”. Wava Halal Grill is cited as the top recommendation, with the answer specifically calling out the Richardson location, the Chicken Gyro Over Rice menu item, the white sauce, and the 4.5-star Uber Eats rating.

Engagement context

Wava Grill is an established multi-location restaurant with an active Google Business Profile, which is why it serves as a clear illustration of how AEO compounds when the underlying SEO foundations are already in place.

05

SECTION 05 · METHODOLOGY

How Rhemic AI builds and holds visibility.

Five disciplines, repeated monthly, against a query map drawn from real buyer intent.

01

Buyer-intent query mapping

We start from the questions an actual buyer asks, not the keywords an SEO tool surfaces. For each client we map 30 to 100 buyer-intent queries across answer engines.

02

Visibility baseline scan

We run those queries across ChatGPT, Claude, Gemini, and Perplexity to capture where the client appears, where the client should appear but doesn't, and which competitors currently own the answer slot.

03

Schema and entity hardening

We deploy structured data (JSON-LD), tighten entity consistency across the web, and build the on-page surface that answer engines actually read when forming a recommendation.

04

Implementation through your repo

Rhemic deploys changes directly through GitHub collaborator access on the End Client repository, gated by the CI/CD pipeline. No back-end admin access required, and no End Client developer bottleneck.

05 Ongoing monitoring
Monthly scans track movement on the original query set, flag new queries that have begun citing the client, and identify competitor changes that warrant a response.

Typical observation windows

SURFACE	FIRST SIGNAL	NOTES
AI answer engines ChatGPT, Claude, Gemini, Perplexity	~30 days	Faster surface, less dependent on indexing latency.
Classic search Google	~60 days	Dependent on Google indexing cadence and Google Business Profile status.

Observation windows are based on prior fulfillment work and assume the foundational website setup (clean URLs, baseline schema, verified Google Business Profile) is in place at engagement start. Specific rankings, placements, and traffic levels are influenced by third-party platforms and are not guaranteed.

06

SECTION 06 · APPLICATION

What this means for real estate.

Real estate buyers ask AI before they ask people. The cited agency starts the conversation already trusted.

Real estate is one of the highest-stakes categories where buyers ask an AI for a recommendation before reaching out. The buyer-intent queries are specific and local, which is the exact shape of query AEO is built for:

- "Best buyers' agent in [suburb]."
- "Who is the top-rated real estate agent for first home buyers in [city]?"
- "Real estate agency with the best reviews near [neighborhood]."
- "Who should I use to sell my apartment in [area]?"

When an agent or agency is the cited answer to those queries, the lead arrives pre-qualified and pre-trusted. The recommendation has done most of the persuasion work before the first conversation.

ABOUT

Rhemic AI

Rhemic AI is a Texas-based Answer Engine Optimization agency operated by MyCrescentAI LLC. We partner with channel partners and businesses across multiple verticals to build durable visibility across AI answer engines and classic search.

Confidential. Prepared for partner distribution. Visibility results depend on third-party platforms outside Rhemic AI's control.
